

Final Project README

FEATURE 1 – Navigation Bar Hover and Disappearance

The icons of the navigation bar (the info circle at the top right of the main page and the home and exit icons on the About page) increase in opacity when hovered over. This shift helps indicate that the icons are clickable and functional. The navigation bar also disappears on the home page of the website while reappearing on the subsequent sections. This was done because I wanted to keep the home/landing page clean; therefore, I wanted the info button to only appear when the individual was looking at the following pages.

FEATURE 2 – Arrow Animation

On the landing page, there is a grey arrow that is animated to bounce up and down using CSS keyframes. This feature was implemented to help indicate that the user should scroll down to continue exploring the website.

FEATURE 3 – Parallax Scrolling

The implementation of parallax scrolling felt appropriate when having a timeline because it helps create the idea of a continuous timeline as one moves between the sections while still indicating that there are separate sections of the website, and the life of George Miller. This was done with the use of Fullpage.js (a Javascript library), lots of tears and frustrations, and help from Myles.
